MOSES K TAPFUMA · MVEOS

Is it worth it? Fill in six numbers you already have.

We are not going to tell you what this saves. We do not know your enquiry volume, your margin or your desk cost — you do. So this worksheet does the arithmetic with *your* numbers, in *your* currency, and tells you how many consignments a month have to move through the new enquiry route for the fee to pay for itself. The number you get is one you can defend to your own boss, because you produced it.

Nothing is stored, nothing is sent, and no figure is sent to us unless you choose to send it.

Step 1 — the fee

The Phase 1 fee, in your currency

We quote in ZAR (50 000, or 56 000 with the rate-request page). If you want the quote in your currency, we re-issue it — enter here the figure you are working to. We do not convert it for you, because a converted number has a rate and a date attached to it.

50000

Your currency

For the labels only. Nothing is converted.

ZMW

Step 2 — six numbers

All six come from your own desk, your own inbox and your own invoices. Leave any of them blank and the worksheet tells you what it cannot yet answer.

1 · Qualified enquiries a month

Your inbox or Facebook page, one month

2 · Share lost or delayed because the answer was not instant or complete (%)

Your desk's honest estimate

3 · Revenue per won consignment

From your invoice

4 · Share of won consignments lost to a competitor who answered faster (%)

Your commercial team's estimate

5 · Minutes it takes to give a customer a rate today

Time three enquiries

6 · Cost of one enquiry answered by a person

Your own desk cost per enquiry

Step 3 — two assumptions you own

We do not know these, so we do not assert them. They are yours to set, and the worksheet shows what each one does to the answer.

7 · Of the enquiries lost or delayed, the share a faster, complete answer would win back (%)

Be conservative. If you are not sure, put 0 and read the answer as the floor.

25

8 · Of the enquiries, the share the new route handles without a person answering each one (%)

Your expectation of what the enquiry form and triage actually absorb.

Work it out

Clear

What this worksheet deliberately does not do

- **No invented saving.** No "save 30% of admin time" figure is asserted anywhere.
- **No AI saving.** The AI programme is a separate sequence with its own price. It is not used to justify Phase 1, and Phase 1 is not used to justify the AI programme. Mixing the two is the first thing a procurement team catches.
- **No discount, no bundle, no free pilot.**

- **No compliance conclusion.** What the Zambian Data Protection Act requires of your business is your lawyer's determination.
- **No ratchet.** Change any input and the answer changes with it — that is the point of doing it in your numbers.

Prepared by Moses K Tapfuma / MVEOS for Modern Xpress Couriers · 31 October 2026. The arithmetic above is a model you complete, not a saving we assert. If the number you get is larger than your monthly volume, this is not worth doing yet — and we would rather tell you that now than take your money.
